WORK EXPERIENCE

SQA Engineer

Sabre Corporation

10/2022 - 03/2024

Lahore

Achievements/Tasks

- **Developed and optimized** automated test scripts in Selenium with Java, enhancing test efficiency and reducing manual effort by 60%.
- **Updated and maintained** bug status in JIRA, ensuring transparent communication and faster resolution times between QA and development teams.
- **Led functional and regression testing** efforts for new functionalities, ensuring smooth releases with minimal issues in production.
- **Improved test case writing** for better coverage and faster execution, contributing to more reliable test processes and early detection of defects.
- **Conducted UI testing** for over 20 clients and 50+ stores, ensuring functionality and user experience, identifying issues pre-launch, and enhancing client satisfaction.
- **Executed over 20 User Acceptance Tests (UAT)** for clients, validating the end product (stores) and gathering feedback for enhancements, ensuring client satisfaction and alignment with their requirements.

EDUCATION

BS Software Engineering

National Textile University

Faisalabad

Projects

- **Virtual Tourist Guide** is a mobile application built in Kotlin that recognizes museum artifacts through the camera and provides detailed information using a trained machine learning model.
- **QUIZBING** is a web application with separate dashboards for students and teachers. Teachers can manage quizzes through CRUD operations, while students can take quizzes and view their scores.

PROJECTS

Book Corner

- Book Corner is a full-stack MERN application, an online bookstore where users can view books, sign up, and sign in to add/remove books to their Wishlist and cart. It also includes a protected admin dashboard where admins can do all CRUD operations on Books and view orders and customers' UI.

E-Commerce Shop

- This app Node.js, Express, MongoDB, and the EJS templating engine. It features a user who can perform CRUD operations on his products. The app includes user authentication with login, signup, and password recovery options. Logged-in users can add products to their cart, create orders, and complete purchases.

Mad Libs Word

- A simple web app created using HTML, CSS, and JavaScript that offers unique stories. Each story comes with a form where users can input words, which are then dynamically inserted into the story to create a customized and humorous narrative.

Post Management API

- This API, developed with Node.js, Express, and MongoDB, allows only authenticated users to do all the CRUD operations on their posts.

PROJECT CERTIFICATIONS

Node JS Developer

Created Book Corner Web App.

Vanilla JS Developer

Created Mad Lib's word Game Web App.
